| | | A. The roads in the Ukrainian SSR as well as in the entire USSR were classified in five general categories before 1941: | | | |
| | | A. The highest or best type which are roads with good hard surfaces of asphalt or gudronized (a coal oil surface). These compare with highways or auto strata. The Russian term for them is "Vysshy". | | | |
| | | B. The "white" roads which crushed rock, or are pa | have hard surfaces of wed with cobblestones | compacted, or macadam; | • |
| | | C. The gravel roads and im | proved natural roads; | y . | |
| | | D. The natural dirt roads which are somewhat impro | | madroga) | |
| | | E. The natural dirt or "blumingroved. This is the | | | |
| æ | | oviet roads are further classified for administrative purposes as close of all-Soviet Union importance (Obscha Souios Snachanye-cout 10% of the roads of the USSR) which are equivalent to US ederal Highways, and those of Republican local importance (Republic coal Snachanye) which are equivalent to state or municipal roads. Coads of all-Soviet Union importance are administered by the State coads Board (Gosoudarstvennoye Doroshnoye Upriavlanye) of the MVD. The Local-Republican roads are administered by the Republican Roads coard. | | | TY SAF |

Committee of the Commit

3. The Ukrainian natural roads are characterized by very poor travel conditions. During spring and fall the natural roads are impassable and offer a very serious obstacle to the development of local transportation, especially in the rural regions. Winter snows hinder all transportation, both on highways and on natural roads, since there is very little snow removal equipment. The dust clouds thrown up by automobiles traveling on the natural roads in the summer are a constant unisance. In 1931 the "Bolshaya Soviet Encyclopedia" asserted that the road network was the "weakest point" of the Soviet economic system.
